# Portable Nebulizer

## Active Vibrating Mesh Tech

Battery Operated

Soundless Operation

Light, Compact and Portable

# Portable Nebulizer

*Ideal choice of respiratory treatment*

## SPECIFICATIONS

| | |
|---|---|
| Weight | 74g (battery excluded) |
| Sound Level | 23dB at 1 meter |
| Medication cup capacity | 6mL |
| Average flow rate | >0.25mL/min |
| Average particle size | <5μm MMAD |

Portable Nebulizer is a light weight, compact, highly-portable and simple-to-use device developed specifically for the patients who require respiratory therapy. Inhaling through a mouth piece or a facial mask, Portable Nebulizer can be applied to baby and adult patients.

1. **Soundless Operation:**
   Without a noisy compressor, nebulization can be carried out when watching TV, listening to musics, reading a book or be used at night time.

2. **Simple-to-use:**
   Insert the medication cup, fill in the medication and press the On/Off button. Nebulization can be completed in only three steps. It is easy to learn and friendly to use.

3. **Light, compact and portable:**
   Portable Nebulizer takes only two AA batteries and therefore, is highly portable, compacted, and is perfect for traveling or outdoor activities.

4. **Low medication residue:**
   Aerosolizes to the last drop and minimizes medication waste.

5. **No mesh breakage issues:**
   Portable Nebulizer uses Excimer laser technology and a biocompatible polyimide to produce the nebulizer mesh head. Therefore, the traditional problems associated with metal-based mesh such as metal mesh breaking, corrosion, clogging, and high power consumption no longer exist.
